

# Alssisted<sup>™</sup> Planning and Performance Management

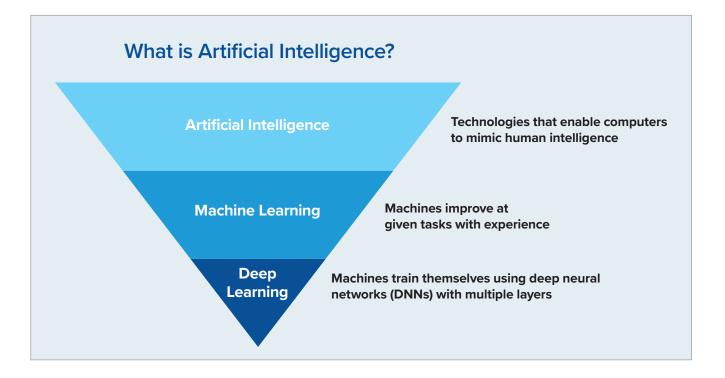

## The Digital Transformation is Fueled by AI

The digital transformation is changing business as we know it. Data is the new currency, and companies need to continuously analyze data from multiple sources in realtime. Artificial Intelligence (AI) thrives on massive data and fuels the digital transformation. Thanks to the availability of affordable and scalable computing resources in the cloud, AI-enabled business applications will soon be the new normal.

Are you ready for this new era where people and intelligent machines are working together towards a common goal?

Alssisted<sup>™</sup> Planning is the Jedox Al engine that enables planners to leverage predicitive analytics, artificial intelligence and machine learning for smarter, more automated Enterprise Performance Management. Alssisted<sup>™</sup> Planning makes predictive forecasting, smart decision-support and dynamic planning accessible to everyone in the company. Drive quality and automation in forecasting, leverage new insights and recommendations for performance management, and use key drivers to simulate the future of your business.

"By 2019, 40% of Digital Transformation Initiatives Will Be Supported by Cognitive/AI Capabilities." IDC, 2018

# How Alssisted<sup>™</sup> Planning works - Core Capabilities

The Jedox AI engine delivers answers to many different types of business questions applying its core functions for predictive planning and analytics, AI and machine learning to Enterprise Performance Management.

#### Alssisted<sup>™</sup> Data Preparation:

The services find gaps and outliers in time series and connected data and recommends values through outlier detection, interpolation and continuous learning.

#### Alssisted<sup>™</sup> Forecasting & Prediction:

The advanced analytics service for time-series data returns the best prediction as a baseline for planning and forecasting. It includes upper and lower bounds as well as a quality factor for the prediction using multiple optimized algorithms like ARIMA, Exponential Smoothing, Holt Winters, Random Walk etc.

### Alssisted<sup>™</sup> Decision-Support:

Find patterns, analyze trends and discover new insights in your data, e.g. financial, customer or product data. A wide selection of advanced analytics, AI and machine learning algorithms are available for feature selection, classification, clustering, segmentation and more.

#### Alssisted<sup>™</sup> Dynamic Planning:

Identify the key drivers for business performance and uncover relationships. Connect drivers for financial and operational plans and integrate real-time data for a dynamic simulation of future business results.

# **"70% of enterprises expect to implement Al**

over the next 12 months." Predictions 2018: The Honeymoon For AI Is Over, Forrester

# Pre-built Jedox Alssisted<sup>™</sup> Planning Applications

Alssisted <sup>™</sup> Planning Model	Description	Sample Questions
	Validation and cleansing of input data is a prerequisite for any AI project. Prepare data for further analysis steps, find missing values and outliers and detect seasonality and patterns. Fill gaps and clean outliers using interpolation.	<ul> <li>Is my data set complete and correct?</li> <li>Do I have seasonality in my data?</li> <li>Are there any recurring events?</li> <li>Are there exceptions, one-time event or outliers?</li> </ul>
<image/>	Planners on all levels automate forecasting using a blend of actuals and Al predictions. Validate plans and identify risks and upsides per region, product or customer. Sales reps as well as sales management monitor target attainment with real-time data during the year.	<ul> <li>What will our revenue be next month, quarter, year?</li> <li>What is the best sales forecast (units/ revenue) including seasonality and recurring events?</li> <li>Will I hit my target for the current year?</li> <li>What's the risk/upside in the sales forecast?</li> </ul>
<complex-block></complex-block>	Planners in finance, sales, marketing, customer service, and other operational and executive teams gain insights on current and predicted churn and profitability KPIs to identify which customers are at risk. Decision- makers gain actionable insights to take corrective and preventative actions.	<ul> <li>Which customers are likely to leave in a respective period?</li> <li>Which transactional, behavioral or demographic customer features influence churn?</li> <li>Who are the most valuable customers (e.g. Life Time Value)?</li> <li>Which features could reduce churn?</li> <li>Which acquisition channelhas the highest retention rate/ profitability?</li> </ul>

# Augmenting Enterprise Performance Management with Predictive Analytics and AI

### Data

Uncover the hidden value in your data from CRM, ERP and other systems. Connect and clean data from critical external sources to plan and forecast your business.

#### Process

# People

Provide access to Al-driven insights and automation for users across the organization. Jedox planners in various roles can make better decisions faster requiring no specialized resources or know-how.

#### Performance

Validate forecast and plans against a baseline and understand risks and upsides. Continuously monitor and predict future performance and receive insights and recommendations for target achievement.

# Technology FAQ: Alssisted<sup>™</sup> Planning

#### What is Alssisted<sup>™</sup> Planning?

Alssisted<sup>™</sup> Planning is the new Jedox Al engine, an integrated cloud service that enables planners to leverage predictive analytics, machine learning and artificial intelligence in Enterprise Performance Management.

#### How does Alssisted<sup>™</sup> Planning support Enterprise Performance Management?

Alssisted<sup>™</sup> Planning can enhance the quality of forecasts and plans and drive process automation. Alssisted<sup>™</sup> Planning can also provide smart insights and recommendations to enable faster decision-making and improve business performance. Last but not least, it can be used for data validation and cleansing. Jedox Alssisted<sup>™</sup> Planning has four core capabilities: Alssisted<sup>™</sup> Data Preparation, Alssisted<sup>™</sup> Forecasting & Prediction, Alssisted<sup>™</sup> Decision-Support, and Alssisted<sup>™</sup> Dynamic Planning. The core functions can be applied to many different EPM topics such as sales forecasting and planning, customer churn and profitability analysis, demand planning and more.

#### Who benefits from Alssisted<sup>™</sup> Planning?

Jedox application builders can design an AI-enabled Jedox solution for all users across the organization with limited requirements for specialized know-how or resources. The AI-driven insights are available for everyone in Jedox Reports, notifications, etc.

#### How can Jedox customers use Alssisted<sup>™</sup> Planning?

Alssisted<sup>™</sup> Planning is a premium cloud service for Jedox customers which integrates via Jedox Integrator in Jedox Software. The cloud service is available for testing on the Jedox Alssisted<sup>™</sup> Planning demo cloud.

#### I have my own AI models and a team of data scientists. How can I leverage the Jedox AI engine?

Alssisted<sup>™</sup> Planning targets Jedox power users and business users and does not require in-depth knowledge of data science. However, it is also possible to integrate your own custom Al models in the Jedox Alssisted<sup>™</sup> Planning service and use Jedox to report data outputs for planners.

#### Is my data secure when I use Alssisted<sup>™</sup> Planning?

The data exchange between the Jedox AI cloud engine and Jedox software is secured by the latest enterprisegrade technologies such as SSL, Microsoft Azure AD, private virtual network etc. to safeguard your data at all times.

#### How reliable are the Alssisted<sup>™</sup> Planning results?

For full transparency Jedox delivers accuracy, significance and probability values for the **Al**ssisted<sup>™</sup> Planning results, so users can check and validate the results.
